Skills

- **Programming Languages:** Python
 - **Core Competencies:** Machine Learning, Deep Learning, Natural Language Processing
 - **AI/ML Frameworks:** PyTorch, TensorFlow, Langchain, scikit-learn, NumPy, Pandas
 - **Tools & Platforms:** Git, Github, Docker, Amazon Web Services (AWS),
 - **Additional Skills:** Flask, Streamlit, FastAPI, LLM Fine-tuning, Ollama, Transformers
-

Work Experience

Jr. DATA SCIENTIST @NEXUSLINK SERVICES PVT. LTD.

JUN 2024 – PRESENT

- Developed an end-to-end object detection system using the yolo-v8, with deployment on runpod serverless.
- Built a RAG system leveraging large language models (LLMs) for enhanced information retrieval.
- Created and deployed scalable APIs using FastAPI and containerized applications with Docker.
- Managed cloud infrastructure and deployments on **AWS**, optimizing for performance and cost, while handling version control and code management through **GitHub** to streamline team collaboration.

Data Science Intern @ Urban Ethics

Jan 2024 – May 2024

- Focused primarily on Machine Learning, gained hands-on experience in various data-related tasks.
 - Conducted data cleaning and exploration to prepare datasets for analysis.
 - Created visualizations to uncover trends and patterns, and built predictive models, developing a solid understanding of core ML concepts.
-

Projects

NSFW Detection System

- Developed and trained a YOLOv8 object detection model to detect explicit content by identifying nude body parts. Data was manually annotated to ensure high accuracy.
- Created a Docker container for the detection system, enabling seamless integration and scalability.
- Hosted the system on RunPod, providing efficient and scalable cloud-based detection for NSFW content.

AI-Powered Document Q&A System / [article](#)

- Developed a Retrieval-Augmented Generation (RAG) application that accepts text and PDF inputs, enabling users to ask questions and get responses based on the content of the files.
- Leveraged Llama 3.1 as the Large Language Model (LLM) with Groq APIs, utilizing Faiss Vector Store for efficient document retrieval.
- Used Langchain as the framework to seamlessly integrate the LLM, document retrieval, and user interaction for an interactive Q&A experience.

RAG Evaluation using RAGAS

- Implemented RAGAS (Retrieval-Augmented Generation for Assessment of Systems) to evaluate RAG models.
 - Enhanced evaluation by integrating retrieval mechanisms with generative capabilities.
 - Analyzed metrics like response accuracy and relevance to assess model performance.
-

Education

Ahmedabad Institute of Technology

- B.E. in Information Technology

2020-2024
